About Trumex Instruments

Trumex Instruments is a specialized manufacturer of high-precision ophthalmic and micro surgical instruments. With over 40 years of legacy in the surgical capital of Sialkot, Pakistan, our foundation is built on skilled craftsmanship, attention to detail, and strict quality control.

Our expertise lies in creating world-class instruments tailored for ophthalmologists, hospitals, and private surgical brands around the world. From single-use tools to custom OEM/ODM solutions, each Trumex instrument is hand-finished and quality-checked by experienced artisans.

Whether you're a practicing surgeon, medical distributor, or brand developer — we are committed to delivering surgical tools that reflect unmatched precision, balance, and durability.

- 40+ Years of Manufacturing Experience
- Located in Sialkot, Pakistan
- Focused on Ophthalmic & Micro Surgical Tools
- OEM & Custom Orders Supported

OPHTHALMIC INSTRUMENT CATEGORIES

◆ **Forceps**

- Colibri
- Capsulorhexis
- Tying
- Cilia
- Muscle
- Artery

SCISSORS

TIPS

**Rounded – for
cutting only**

**Sharp/pointed
– can pierce
tissue as well
as cut**

JAWS

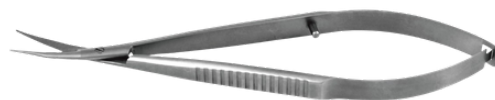

**Angled – enables
blades to be positioned
at the correct angle to
the tissue, particularly
useful when excising**

**Curved – to reach more
difficult areas or when a
curved cut is required.
May allow better
visualisation of tips**

**Straight – good for
when direct access
is available or when
a straight cut is
required**

SPECULUMS

Open: allows good access for instruments
e.g. Phaco handpiece that might otherwise rest on the top bar of a closed blade making surgery difficult

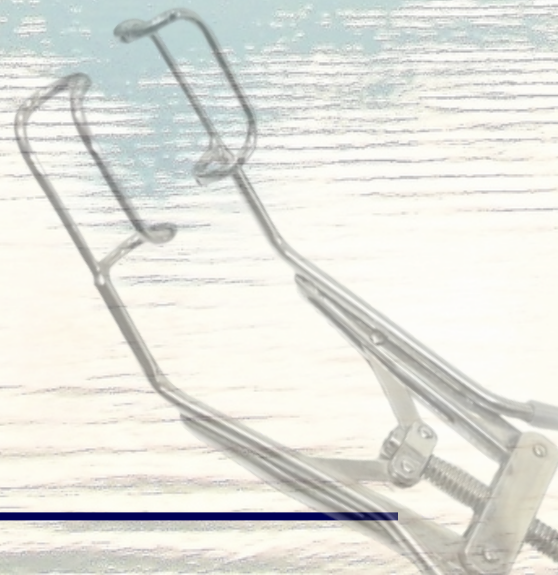

Closed: good hold on eyelids for procedures where the top bar does not cause a problem
e.g. trabeculectomy or temporal incision phaco

Wire: more comfortable for the patient under local anaesthetic, particularly when used with a sliding wire speculum or a non-adjustable speculum

Solid: holds eyelids securely

TM-1206 **SS**

CHOPPERS & MANIPULATORS

**Chopper/Splitter:**

used during phacoemulsification (Phaco) chop procedure to manually break up the crystalline lens

Manipulator:

used to move lens fragments during Phaco

Dialer:

used to position the Intraocular lens implant (IOL)

Hook (micro):

designed to 'push' or 'pull' the iris or lens capsule

Vectis:

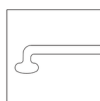

a traditional instrument designed to support the crystalline lens and aid with its removal during intracapsular cataract extraction procedure

Repositor:

used to reposition tissue, usually iris. May also be used to separate adhesions (synechia) between the iris and lens capsule.

Custom Design & OEM Solutions

At Trumex Instruments, we understand that no two surgeons or procedures are the same. That's why we offer full custom design support — helping you turn your ideas, drawings, or sample tools into functional surgical-grade instruments.

Whether you are a surgeon, hospital buyer, or brand manager looking to launch or expand your product line — our experienced OEM/ODM team is ready to support you at every step.

We Accept:

- Hand-drawn sketches or technical drawings
- Sample instruments for duplication or modification
- Reference catalogs and product photos
- Custom packaging and branding requirements

What You Get:

- Precise replication or redesign of instruments
- Flexible production volumes (from prototypes to bulk)
- Branding with your logo or private label
- Dedicated quality control for custom orders

Let us help you bring your instrument idea to life — with the same precision and craftsmanship trusted worldwide.

Can't Find What You Need?

Our catalog includes a wide range of premium ophthalmic instruments — but we understand that every surgeon has unique preferences and requirements.

If you didn't find the exact instrument you were looking for, please don't hesitate to contact us.

You can send us:

- Photos or sketches of your required instrument
- Technical specifications (length, tip size, handle type, etc.)
- Product pages or screenshots from other catalogs
- Reference item codes from previous purchases
